

Avec Firefox :

The image shows a Firefox browser window with a security warning. The address bar shows `https://cdt.sainte-marie-vitre.org`. The main content area displays the message "La connexion n'est pas sécurisée" (The connection is not secure) and explains that the site's certificate is invalid. It lists the domains `cluster014.hosting.ovh.net` and `www.cluster014.hosting.ovh.net` as valid for the certificate. The error code is `SSL_ERROR_BAD_CERT_DOMAIN`. There are two red arrows: one labeled '1' pointing to the "Avancé" (Advanced) button, and another labeled '2' pointing to the "Ajouter une exception..." (Add exception...) button.

The "Ajout d'une exception de sécurité" (Add security exception) dialog box is open. It contains a warning icon and text: "Vous êtes en train de passer outre la façon dont Firefox identifie ce site. Les banques, magasins et autres sites web publics légitimes ne vous demanderont pas de faire cela." (You are bypassing the way Firefox identifies this site. Legitimate public websites like banks and stores will not ask you to do this.) The "Serveur" (Server) section shows the "Adresse" (Address) as `https://cdt.sainte-marie-vitre.org/` and a button "Obtenir le certificat" (Get certificate). The "État du certificat" (Certificate status) section shows "Ce site essaie de s'identifier lui-même avec des informations invalides." (This site is trying to identify itself with invalid information.) and a "Voir..." (View...) button. The "Mauvais site" (Bad site) section states "Le certificat appartient à un site différent, ce qui pourrait indiquer que quelqu'un tente d'usurper l'identité de ce site." (The certificate belongs to a different site, which might indicate that someone is trying to impersonate this site.) There is a checkbox "Conserver cette exception de façon permanente" (Keep this exception permanent) which is checked. A red arrow labeled '3' points to the "Confirmer l'exception de sécurité" (Confirm security exception) button.
